

# Turbo-charge the productivity of your Gilian equipment: Get More Done Faster!

## Gilian® | CONNECT Pro

Go beyond just data collection. Streamline workflows, boost efficiency, and gain deeper insights. The Gilian CONNECT Pro software minimizes time-consuming tasks and cumbersome processes.

### Gilian CONNECT Pro 3.0 is more than just streamlined data management.

It's about unlocking the full potential of your Gilian air sampling and calibration instruments with powerful new features and benefits:

**Batch Reporting:** Efficiently query and analyze sampling event data with options to organize Sample Reports into dedicated batch folders.

**Database Management:** Added ability to centralize and consolidate multiple databases, previous versions of Gilian Connect and/or newer Connect Pro, to store all your needed sample data in one location

**Add Devices:** Ability to add custom devices that are not downloadable and their associated event detail or calibration information.

- **Advanced configuration and programming tools** will save time and resources.
- **Enhanced reporting capabilities with improved data visualization tools** allow users to gain deeper insights and make informed decisions.
- **Integrates and links information** from GilAir Plus air sampling pumps and Go-Cal Pro air flow calibrators for complete air sampling continuity.
- **Download and organize** - easy filtering allows review of historic events where exposure limits have been exceeded.
- **Customize the software** to your specific needs, including user preferences, measurement units, and reporting templates.

### Gilian CONNECT Pro 3.0 seamlessly integrates with:

- **Go-Cal Pro** air flow calibrators
- **GilAir Plus** air sampling pumps \*

\* Functional with Data-Logging and STP models only

# Gilian® | CONNECT Pro

	Feature	Customer Benefit
	<b>CONFIGURABILITY</b>	
1	Configure pump and calibrator operating parameters	Faster set-up: Avoid manual entry mistakes on devices
2	Easily replicate settings across many pumps	Save time and ensure consistency. Standardize parameters across your fleet with one-click replication.
3	Create pump runtime programs	Automate sampling: Schedule sampling events in advance.
	<b>DATA MANAGEMENT</b>	
4	Auto-fill common event details using Event Template	Streamline recordkeeping: Build an Industrial Hygiene (IH) program database efficiently with pre-populated templates.
5	Download and archive sampling data from pumps	Analyze trends and ensure compliance: Compare metadata and determine representative samples for accurate analysis.
6	Download and archive calibration data from calibrator	Maintain accuracy and traceability: Verify proper instrument calibration and ensure data integrity.
	<b>TRACEABILITY AND COMPLIANCE</b>	
7	Link calibrator information to pump sampling events	Guarantee data integrity: Link calibration data to specific sampling events.
8	Enter information on worker and/or sampling areas	Enhance compliance and track trends: Build an IH program database for better compliance tracking and historical comparisons.
9	Enter in sample results from laboratory and compare to exposure limits	Identify risks and ensure worker safety: Analyze exposure levels against limits, informing decisions and protecting employees.
10	Search and filter sampling and calibration history	Find data quickly and easily: Efficiently search and filter your database for specific sampling information.
	<b>REPORTING AND DOCUMENTATION</b>	
11	Print sampling reports	Generate audit-ready documentation: Provide detailed backups of sampling events.
12	Print calibration reports	Demonstrate instrument accuracy: Show consistent flow maintenance (+/- 5%) and document proper calibration for compliance.

**Gilian CONNECT Pro 3.0 is PC compatible with Microsoft Windows OS 10 or higher.**

**Current CONNECT Pro Version 3.1.0.0 is Compatible with:**

- GilAir Plus pumps with Firmware 2.4.0 and higher, released in July of 2015
- GilAir Plus Docking Station with Firmware 3.3 and higher, released in December of 2016
- All recently launched Go-Cal Pro calibrators with Firmware 1.0.4 and higher
